

TX Series

Hi-load welding positioners

Positioners of the TX series are machines characterized by high useful capacity values from 500kg to 30.000 kg, manufactured with particularly robust structures to best carry out the heavy work required.

Models 500 - 800 - 1200: Rotation with 3Ph AC motor INVERTER controlled and a double reducer. Inclination of the table is now motorized as standard and also the tilting motor is controlled from an inveter. The standard version provides for a manual work cycle (Forward Motion-Stop-Backward Motion) carried out in 2 stages or 4 stages. Automatic cycle is available in option. Biggest size after 3.000Kg use hydraulic tilting technology. Different sizes and versions can be done on request.

TX CB Bench positioner :

Hi load capacity rotating table with the following additions: tail stock activated by a pneumatic cylinder sliding on a grounded base. This becomes extremely useful for centering and locking down the piece to be welded. The length between the table and tailstock can be customized on request. This unit offer an incredible possibility of personalisation, and it's always a special machine designed on request.

TX 500	Semi-automatic rotary table, load capacity 500 Kg	
TX 800	Semi-automatic rotary table, load capacity 800 Kg	
TX 1200	Semi-automatic rotary table, load capacity 1200 Kg
